

LINEAR ARM

The Linear arms maneuver smoothly as it absorbs the torque reactions from the screwdrivers providing ergonomic support for the operator. The fluid movement increases precision and production for a variety of torque applications. Prevents cross threading and side load. Keeps tool perpendicular. Reduces RMI (Repetitive Motion Injury) and CTS (Carpal Tunnel Syndrome) while boosting production. Extends in horizontal direction and arm length is adjustable.

Code	Model	Max torque	Max reach	Min reach
010681	LINAR1	25 Nm	665 mm	184 mm
